

# Arden Plus®

The gentle analgesic/anti-inflammatory

## ARDEN PLUS

### Description

**Arden Plus**, an Ibuprofen-paracetamol preparation, has strong analgesic, anti-inflammatory properties. **Arden Plus** is specially buffered with an antacid, since non-selective NSAIDs like meloxicam, piroxicam or ibuprofen do offer relief from pain but cause damage to the gastric lining leading to severe gastric erosions, ulcerations and bleeding. **Arden Plus** contains Magnesium trisilicate, an antacid to relieve possibly occurring symptom of acidity. Hence there is no need to prescribe a separate antacid with **Arden Plus**. **Arden Plus** is film-coated and does not leave any bitter after-taste.

### Composition

Each film-coated tablet contains

Ibuprofen IP	400 mg
Paracetamol IP	325 mg
Magnesium Trisilicate IP	100 mg

in an easy to spread cream base.

### Indications

Symptomatic relief of pain and fever associated with inflammatory conditions.

### Dosage

Adults in acute severe pain, initially 1 tablet 3 times a day till relief, thereafter 1 to 2 tablet daily or as directed by the Physician

### Availability

Blister strips of 10 tablets
